## Pot Anchor

Container system that has sufficient stability to remain upright under strong winds

The rigidity of the anchor enables forces to be distributed among the container, facilitating handling of the plant.

**Give support to the pot**

by preventing wind and mechanical harvest from pushing over the pot.

**Ideal for 1/2" Socket drill**

**Integrated support to the container**

by firmly securing the rigid screw to the middle region of each container stabilizing it.

**Easy Installation**

Scan to see the installation video.
