Kratos

For hydroponic cultivation

The Kratos, with its unique and exclusive design, channels all drain water into a narrow gutter in the center of the spacer. The open space between the slab and the gutter provides aeration and prevents the roots from growing out of the slab and into contact with drainage water.

Better drainage

V-shape improves drainage from slab by reducing saturated zone.

Simply to use

Easy and fast installation.
Easy to wash and disinfect.

Stackable

Reduce logistics costs.

Clean

Narrow gutter keeps ground free of water by containing all drainage below the slab, avoiding the dirt buildup and algae formation common in wide gutters.

No concern of fruit touching dirty, wide gutter.

Airflow and Oxygenation

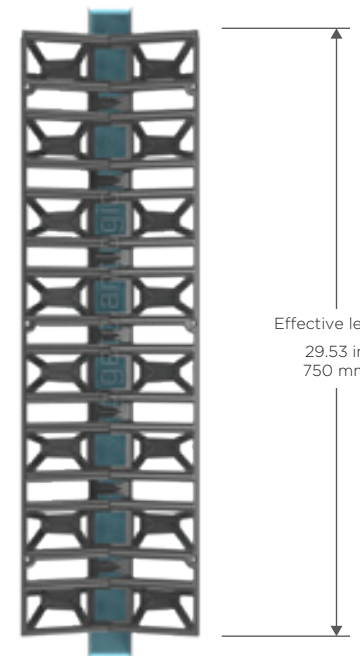

Keeps roots off the ground and out of the gutter, preventing contact with pathogens.

Cost effective

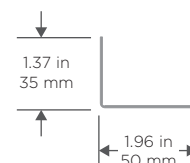

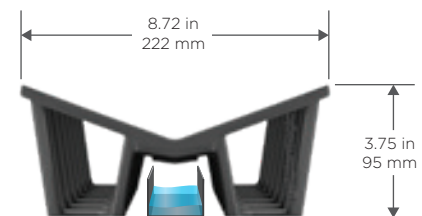

More economical than wide gutter.

Durable

UV stabilized.
