Hi-Grow[®] Tabletop strawberry growing system

**Lower cost
while increasing
your yield.**

Hi-Grow®

TABLETOP STRAWBERRY
GROWING SYSTEM

Effective for strawberry production

The Hi-grow tabletop strawberry system has been developed from the ground up based on the fundamentals of substrate production – reducing capital costs while improving oxygenation, drainage and separation from drainage. We have broken the tradition of using expensive metal gutters, and offer a breakthrough product that reduces costs while improving quality instead of compromising quality.

Designed to lower cost while increasing yield.

Our latest system includes several versions, from our lowest priced option using tensioned wires, to our premium product built with snap-together metal tubes. It can support troughs and slabs. It is available with and without drainage collection and supports in-line drippers as well as drip stakes.

What sets Plantlogic apart from our competitors is our consistent focus on innovation to improve growers' bottom line. We do this by optimizing root health to improving yields, and increasing labor efficiency. We combine feedback from years of field trials with diverse in-house manufacturing capability including metal forming and plastics. We are able then to combine technologies to develop a truly breakthrough system that saves money and improves yields. It is rare that a product can provide better performance and at a lower price.

While some systems claim to lower grower's upfront cost, they actually increase labor during installation, increase substrate costs, or reduce substrate utilization. We haven't cut corners on quality or plant performance.

Rail Version - Trough system

Wire clips
specially designed for
in-line or lateral
irrigation.

Maximize the crop area
Overlapping handles
saves space along row.

**Maximize airflow
and oxygenation**

Wide handle
provides
strawberry
truss support.

Cost less than other
tabletop substrate
systems.

**Optional drainage
collection**
Helps control humidity
in greenhouses and
tunnels.

Excellent drainage

Drainage collection keeps ground dry and prevents pollution from fertilizer runoff.

Drainage collection prevents groundwater pollution from run off.

Non-drainage collection, plastic or metal gutter available.

Save money by using bulk substrate.

Rail Version - Slab system

Wire clips
specially designed for
lateral irrigation

**Maximize airflow
and oxygenation**

Able to be upgraded to
the trough version at
anytime.

**Lower upfront
capital expense.**

Excellent drainage

**Optional drainage
collection**
Helps control humidity
in greenhouses and
tunnels.

Avoids debris and algae buildup in gutter.

Hard troughs allows moving of plants from nursery to production area without
damaging roots.

Specialized troughs for Hi-Grow® System

9L Trough with truss support

18L Trough with truss support

Slab base

Dimensions

Plastic gutter

Metal gutter

Available colors:

		A	B	C
1305409	9L Trough For Strawberries, With Truss Support	156 mm	257 mm	511 mm
1305909	18L Trough For Strawberries, With Truss Support	142 mm	165 mm	1014 mm
1302809	Slab base for rail grow	-	205 mm	-
1300010	Plastic gutter	45 mm	50 mm	-
30050008	Metal gutter	32 mm	-	-
