Hi-Grow[®] Strawberry growing system

**Lower cost
while increasing
your yield.**

Hi-Grow

STRAWBERRY GROWING
SYSTEM

Effective for strawberry production

Our Hi-Grow strawberry growing system was developed from the ground up based on the fundamentals of substrate production – reduce capital cost, improve oxygenation, improve drainage, and maintain plant separation from drainage. We broke the tradition of using expensive metal gutters when we developed our breakthrough product. We not only reduce costs but increase quality.

Designed to lower cost while increasing yield.

Our latest system includes several versions from our lowest priced to our premium product built with snap together metal tubes. Available in hanging and tabletop versions, our

Hi-Grow system can support troughs or slabs, is available with or without drainage collection, and can support inline drippers as well as drip stakes.

Easy installation and labor savings

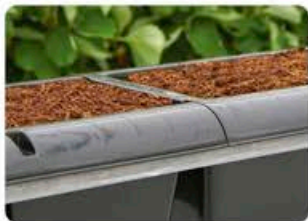

Hi-Grow system installation is quicker and easier compared to traditional metal gutters. It is possible to install 50-meter lines (with drainage collection gutter) with just three people in approximately 4 hours per line, allowing for significant labor savings. Additionally, the Hi Grow system does not require land leveling, which simplifies installation and reduces initial costs.

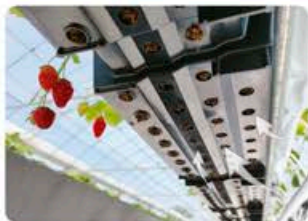

Tabletop system - Trough version

Wire clips
specially designed for
in-line or lateral
irrigation.

Maximize the crop area
Overlapping handles
saves space along row.

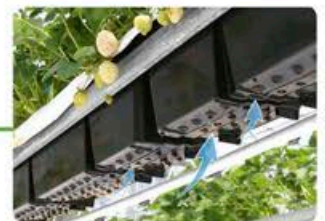

**Maximize airflow
and oxygenation**

Cost less than other
tabletop substrate
systems.

**Optional drainage
collection**
Helps control humidity
in greenhouses and
tunnels.

Excellent drainage

Easy to install.

Tops of posts don't require precision grading because the gutter slope is independently adjustable.

More economical than traditional systems.

Optional drainage collection.

The drainage system is separate from the planting system, making installation easier and reducing disease risk.

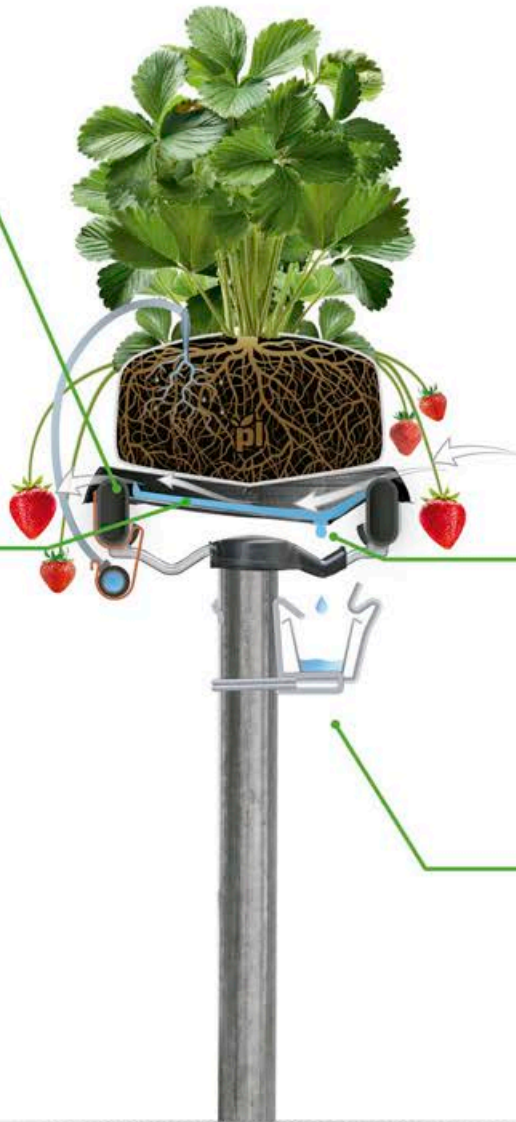

Tabletop system - Slab version

Hose clips
specially designed for lateral irrigation

Maximize airflow and oxygenation

Lower upfront capital expense.

Excellent drainage

Optional drainage collection

Hanging system - Trough version

Hanging bracket
100% customizable to each grower's needs.

Optional bracket available for truss support tape and leaf-fruit separation.

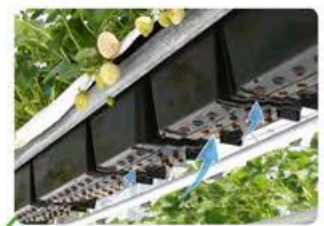

Chain or steel wire available.

Also available for production in slabs.

Maximize airflow and oxygenation

Excellent drainage

Post-free system is easier to install.
